C. R. ROOT

1891—Serving Western Planters—1948

WITH the emphasis on food being stressed throughout the Nation and the world, each one of us should be impressed with the necessity of a home garden, thus increasing the production of home garden vegetables. You can easily plan available ground, small plots will do well.

The pleasures of gardening are many; from the preparation of the soil, through the planting, cultivating and harvesting. By planting the early sorts, together with late varieties, dividends continue all summer and fall.

Every time you use home grown vegetables on your table or pick flowers from your garden to beautify your home, you are actually releasing that much productive effort for the raising of food by others for others.

A far-reaching program can only be successful when each individual co-operates. And when that co-operation will bring you beauty and abundance for your home and family, take a look at your garden gear, decide now to grow your own this year.

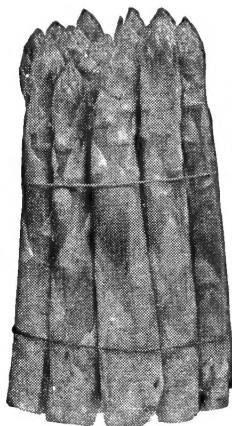

This catalog lists the items you will need—dependable, quality merchandise—personally selected for your garden. Order by mail, or drop in at our store. We will do our best to help you make your garden a success.

Sincerely,

A stylized, handwritten signature of C. R. Root in dark ink.

CABBAGE

Three ounces of seed to 100 yards of row. One ounce will produce 2,000 plants.

The best way to raise Cabbage in the small garden is from the plants. Cabbage requires an abundance of both moisture and tilling. It is also advisable to enrich the ground if possible. Fertilizer may be conserved by placing a small amount under each hill before plants are set. It will pay you to set out both early and late varieties. Set early Cabbage 18 inches apart in rows and 2 feet apart between rows. Late Cabbage 2 feet apart in rows and 3 feet apart between rows. Cultural leaflet on request.

Eat CARROTS for Health

Two ounces for
100 feet of drill.

Furrows for Carrots should be 14 inches apart and from a half-inch to an inch deep. The seed can be sown from mid-April to mid-May; it should be sown rather close, as Carrots do not germinate very well. Thin the plants out to 4 inches apart when they are 4 inches high. Early Snowball

Pascal Celery

Golden Bantam

Stowell's Evergreen

CAULIFLOWER

One ounce will sow a bed 40 square feet and produce about 2,000 plants.

All our Cauliflower seed is growers' first quality sifted, thus higher cost. For the small garden we advise getting Cauliflower plants in preference to growing from seed. The cultivation is the same as that of Cabbage, except that Cauliflower favors even a moister soil. Proper tilling and watering affect this very much. Tie the long leaves together over the growing head to keep it white. Plants ready in April and May. Treat the seed with Semesan.

Early Snowball American grown. "Dependable Grade." Positively nothing better for earliness and quality; produces fine white heads. The outer leaves are short, allowing the plants to be set closer together than most varieties, 18 to 20 inches being far enough apart. Pkt. 15c; ¼ oz. 85c; oz. \$2.50.

CELERY

Three ounces of seed to 100 yards of row. One ounce will produce 7,000 to 10,000 good plants.

Celery, to be raised from the seed, requires almost expert care. It is better for those who are not practical gardeners to buy Celery plants. These are set out about the first of June, a foot apart, and mature along the last of September or during the first two weeks of October. Celery is by nature a marsh plant, and the soil about it must be kept wet, especially when the plants are young. When they get to be about 4 inches high, shear off the tops; it makes the plant more stocky. As the plants grow, gradually draw the earth up around them to keep the stalks white; by the end of fall all should be covered but the tops. A heavy paper wrapped around each stalk will insure tender, white plants. Celery is planted in rows that should be at least 3 feet apart. About 30,000 plants to the acre.

GOLDEN SELF-BLANCHING. American grown. Tall. The choicest sort of delicious Celery; with broad, heavy stalks, which blanch into a rich, appetizing golden yellow, making this the most popular golden Celery on the market. Pkt. 10c; ¼ oz. 35c; oz. \$1.00; ¼ lb. \$3.00.

Giant Pascal Standard market sort for winter use. Pkt. 10c; ¼ oz. 25c; oz. 75c; ¼ lb. \$2.25.

CHICORY

LARGE-ROOTED. For salads, also roots for a coffee drink. Pkt. 10c; oz. 40c; ¼ lb. \$1.25.

WITLOOF—Brussels. True French Endive and very best variety. Pkt. 10c; oz. 50c; ¼ lb. \$1.50.

CELTUCE

A new vegetable introduced by W. Atlee Burpee Co. Of the lettuce family, being used like spinach as "greens." Pkt. 10c; ¼ oz. 30c; oz. 90c.

CHIVES - Schnittlauch

A member of the Onion family. Hardy. The seed grows readily. A packet makes a suitable home supply. Pkt. 10c; ¼ oz. 30c; oz. 90c. The growing plants are in bunches that can be divided. Per bunch 35c each, postpaid.

COLLARDS

GEORGIA or SOUTHERN. The standard variety for greens. Pkt. 5c; oz. 15c; ¼ lb. 45c.

CORN, SWEET

One pound will plant 100 hills. 10 pounds an acre.

Corn should be planted to the north of the garden, so as not to shade the other crops. It should not be planted in a very small garden unless it is the only crop to be raised. It needs shallow but continual tilling. Just after the middle of May is a good time to plant. The rows should be 3 feet apart, the kernels sown three together every 6 inches in the furrow. When the Corn is well started, pull out all but one stalk to each place. Keep the little shoots or suckers cut from around the roots. The ears are ready to pick when the silk is brown and the kernels on the tip are plump.

Prices for each of the following six varieties:

Pkt. 10c; ¼ lb. 15c; ½ lb. 25c; 1 lb. 40c; 2-lb. pkg. 75c; 5 lbs. \$1.60.

NOT PREPAID: 5 lbs. \$1.40; 10 lbs. \$2.40; 25 lbs. \$5.00.

Early Golden Bantam "Dependable Grade." Select strain of exquisite quality; when ready to use is of a bright golden yellow color. It can be planted very early; is hardy. The small stalks grow very closely together in the row and will produce 2 to 3 ears each. We especially recommend it on account of its ability to stand the cold weather of spring.

GIANT BANTAM. The popular Golden Bantam, in the 12-rowed, large ear type.

BLACK MEXICAN. Small ears, very sweet. Suitable for home use.

STOWELL'S EVERGREEN. Large, late, sweet, popular home garden sort. Very heavy producer. 16 to 18 rowed.

HYBRID VARIETIES SWEET CORN

The result of hybridizing gives us seed that produces very early, deliciously sweet and remarkably uniform ears—just what every home garden wants. Make two or three plantings, 10 to 14 days apart, then you have corn through a prolonged period, fresh from your garden to the table.

GOLDEN CROSS BANTAM HYBRID. An improved hybrid. Ears are about 8 inches long, running 10-, 12- and 14-rowed. 85 to 88 days. Best for home garden. Plant at intervals of two weeks.

LETTUCE All Select

One ounce for 200 feet of row. One ounce of Head Varieties will plant 400 feet of row. Two pounds per acre.

Lettuce will stand slight frosts, and is therefore one of the first things to plant; if the ground is well prepared, early April is not too soon. It can be planted up to the middle of July, and many prefer the later plantings. Place seed in trench half an inch deep, cover with fine soil to top of the trench and press the soil down. The plants should be up in about a week. If head varieties are wanted, thin to 4 or 5 inches. The heads are usually well formed in 10 weeks and should then be cut or they will rapidly go to seed, especially in hot weather. The rows of lettuce should be at least a foot apart. The quality of the lettuce depends on the tilling—keep the hoe busy.

*These varieties form heads.

*** Great Lakes** This variety is called a head Lettuce, though not as large as the western varieties of Wonderful or Imperial. However, it has been proven as an excellent small head variety doing well in hot weather. We do believe it suitable for our Home Gardens. Received All-America Prize in 1943. Pkt. 10c; ¼ oz. 20c; oz. 50c; ¼ lb. \$1.50.

GARDEN PEAS *Sweet and Tender*

One pound will sow 50 feet, 90 pounds an acre.

This is to be filled gradually with fine soil as plants grow, until the furrow is filled level with the ground. By this method, the sun can warm through the soil to the roots. Peas can be planted as soon as the frost is out of the ground; the rows should be 2½ feet apart. Plant the climbing varieties near a fence and train them on wire netting. Our seed all Western grown.

TOMATOES *Delicious*

One ounce will produce 1,500 plants; ¼ pound to transplant for one acre.

Tomatoes are planted indoors in a window garden about the first of March. When the third leaf of a plant has formed, put the plant into a 3-inch pot or box. After all danger of frost is over the plants may be set in the ground. Do not plant Tomatoes within 3 feet of any other crop. Dig holes 3 feet apart and deep enough to allow placing the plant an inch or two deeper than it was in the pot. Cover the top of the pot with your fingers, holding the plant between them; then turn the pot upside down, tapping it with a trowel or other tool, when the plant will easily come out. Place it in the ground, pressing the earth around it; if the earth is dry, water it as soon as the plants are set. Some people put a ring of heavy paper around the plant, at the top of the soil, to keep off cutworms. June 1st is the usual time for transplanting in northern latitudes. Tie the growing plants to stakes. We will have plants ready in May and June.

Tomato Seed should be carefully treated with **SEMESAN POWDER** to prevent disease.

WILT-RESISTANT VARIETIES

This class of tomatoes is especially desirable where blight and wilt affects the ordinary varieties. In any event they are good producers of reasonably perfect fruit.

The Pritchard 73 days. (Scarlet Topper.) The last wilt-resistant variety being developed by Prof. Pritchard of Washington, thus named in his honor. Medium early, smooth and solid, of scarlet color. Sets heavily, thus produces well. Pkt. 10c; oz. 60c; ¼ lb. \$1.80.

Marglobe 80 days. A variety brought to popularity by seed distributed from Washington. Is bright red and very round. Slightly later than Earliana but larger. The bearing season is long, thus especially suitable for home gardens. Much liked by canners. In New Jersey they claim nothing better in Tomatoes. A truly wilt-resistant variety. Pkt. 10c; oz. 50c; ¼ lb. \$1.50.

Certified Stock Marglobe This strain comes to us from a Tomato specialist, who assures us it is reasonably free of wilt, black spot and root rot. We recommend the seed. In 1-oz. sealed packages for 75c. We put up in special pkts. 15c.

ASTERS

Annual. The queen of the summer-blooming plants. Varieties listed represent the finest Asters of the early (1), midseason (2), and late (3) types. Require a rich soil with ample water, and a sunny exposure.

ASTER WILT

The wilt disease of Asters is caused by a parasitic fungus, which may attack the plant at any stage in its growth from the seedling to the seed-producing age. The spores may be carried on the seed, on implements used in preparing the soil and the soil itself. When once introduced into the soil, it persists indefinitely and makes the land "aster sick."

A wilt-resistant strain of Asters is one which, although planted on the sick soil will withstand the attacks of the fungus and develop into strong, healthy plants, while the non-resistant strains may succumb.

Much disappointment on account of Aster Wilt has been overcome by the use of Wilt-Resistant strains.

Brief Cultural Notes

ZINNIAS: These are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost is past. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3 to 4 inches tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for quite a while so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture.

CHRYSANTHEMUMS: Gardeners are coming more and more to grow the early flowered sorts, which can now be had in all colors. Young Chrysanthemum plants bloom better than huge clumps, so divide the clumps of hardy Chrysanthemums each spring, setting small divisions in newly enriched spots in the garden. As the shoots grow 3 or 4 inches tall, pinch out the tops; this will cause them to branch freely. A tablespoonful or two of bone meal dug into the soil about the plants early in the spring will be beneficial. Watering the plants each week with manure water will produce a lusty growth and increase the size of the flowers. Generally Chrysanthemums are troubled with black, brown or purple plant lice, but if they are sprayed with nicotine extract, they will be kept in check and will not become bad pests if one is regular in the work and the spraying is not deferred too long. During the summer the plants need plenty of water and it is wise to syringe the leaves frequently in order to lessen the attacks of red spider, which is an almost microscopic insect, whose injury is evident from leaves turning whitish in appearance.

MORNING GLORIES: Never plant until the soil is thoroughly warm. If it is too cool the seeds will rot instead of germinating. To aid germination of particularly hard-seeded varieties, filing a notch at the top of the seed will help considerably. Select the driest, sandiest part of the garden and sow where the plants are to flower as the Morning-Glories resent transplanting. Keep on the dry side; heavy watering induces foliage growth at the expense of flowers. A poor soil is preferable to a rich one.

The **RED, WHITE** and **BLUE** patriotic mixture will make a fine display on your fence or trellis. Made up of the fine large flowering varieties as described on page 16.

Lily-of-the-Valley

Estate Lily

Lilium Regale—Royal Lily

The use of fertilizers with Lilies is most important. Well rotted sheep manure is best but should never be used in contact with the bulb. Bone meal as a top dressing is very necessary.

See page 41.

Stately Lilies are of the easiest culture, and the varieties listed below are all perfectly hardy. After once being planted, they will increase in beauty and size with each succeeding year. Lilies do best in a well drained sandy soil, which should be fairly rich, and the plants should be given plenty of water during periods of drought. In order to grow Lilies to large size, the bulbs should be planted deeply, 6 inches or more, and the soil stirred to double the depth of planting.

Standard Lilies

Henryi Orange Speciosum Lily. Of vigorous growth and will thrive in any soil. If planted in partial shade the rich orange coloring of the flowers will be highly accentuated. Cover 10 inches. Height 3 to 4 feet, although well established plants will go higher. Blooms July-August. Very prolific bloomer. Each 50c; 3 for \$1.35.

Elegans Orange-red blossoms in early July. Height 12 to 18 inches. Cover bulbs 5 to 6 inches deep. Each 35c; 3 for \$1.00.

Regale Royal Lily. A magnificent Lily; the pure white flowers, heavy with fragrance, and with canary-yellow throat, have an outside pink suffusion. Cover 8 inches. Height 3 to 5 feet. Blooms June, July.

Large bulbs, each 40c; 3 for \$1.10.
Medium bulbs, each 35c; 3 for \$1.00.

Tigrinum Tiger Lily. Single. The old popular Lily that should be in every garden. Orange-red, black spots. Cover 8 inches. Height 4 to 5 feet. Blooms August-September. Each 35c; 3 for \$1.00; 6 for \$1.75.

Album White, usually pure white. Each \$1.00; 3 for \$2.75.

Estate Lily Just the kind we have been waiting for. The blossoms are very much like the popular Easter Lilies. Can be forced. Each 65c; 3 for \$1.75; 6 for \$3.25.

HARDY LILY COLLECTION

One each of the above six varieties, a \$3.25 value for
\$3.00

SUPERB EXHIBITION GLADIOLUS

MORE POPULAR THAN EVER—ALL POSTPAID

The Gladiolus are the most attractive and useful cut flowers of all the summer flowering bulbs. The long, graceful spikes that carry fifteen to twenty buds may be cut soon as the first flower buds show color; then, if kept in water each successive bud will develop and thus prolong the blooming many days.

The planting season starts in April, and continues until in June, at intervals of two weeks; you thus have flowers from late July until frost time. Best results are obtained in a sunny position and placing the bulbs fully 6 inches deep. Water freely.

A very complete Cultural Leaflet on Gladiolus free with orders upon request. To eliminate aphids and thrips treat with Semesan, Lysol or Corrosive Sublimate, and store with Naphthalene Flakes.

Gladiolus bulbs are usually ready in March, and through April and May into June.

This assortment includes one bulb each of 18 different varieties though not labeled. This Collection is Extraordinary.

Caution Be sure and treat all Gladiolus bulbs before planting. The past few years there has been great damage caused by Gladiolus thrips. They injure the foliage and unfolded buds so that they do not open. Be on the safe side, whether planting new stock or bulbs saved from previous year, treat the bulbs just before planting. Semesan or Lysol are very effective treatments.

Directions for Growing Conifer Trees from Seed

Pine, Spruce and Juniper seeds are very slow in germinating.
To hurry germination, many propagators stratify the seeds. This
is done by mixing the seed with sand or peat moss, with sufficient
moisture added to prevent drying. Store the seeds in a box for a
sufficient length of time to allow the germ to become well started.

The seed bed is usually eight feet wide and any length required.
The ground should be very thoroughly pulverized, the seed scat-
tered broadcast on the surface, or in shallow rows, and covered
with sand or a very light sandy loam to the depth of one-fourth
of an inch. Caution must be used or many seedlings may be
killed by drought or by white-spot injury to the base of the stems.

Stakes should be driven at intervals on each side of the seed
bed and a rail or board nailed on to support shading. The latter is
best made by nailing lath on small poles ten feet long. Eight
feet should be covered with lath about one-half inch apart, allowing
balance of poles to project at the end. Young seedlings must be
shaded on appearance.

There is a very short crop of Conifer Tree Seeds this
season.

SEEDS FOR EVERY LAWN REQUIREMENT

About Lawns

A good lawn is, without doubt, one of the important features of the home grounds or of any landscape design. It should be remembered when considering a new lawn that the cost of the seed is only a very small part of the actual investment. The labor cost is the greatest. It is thus no economy to save a few cents by buying seed of a questionable quality, only to realize the added expense in years to come of repatching and doing the lawn over and over again. We take pleasure in recommending our grades of Kentucky Blue Grass, which are the best obtainable.

For special purposes and certain locations we have made up mixtures which we feel very suitable. When you are in doubt about what seed is most suited for your particular purpose, please write us. Our leaflets give much information.

SPECIAL LEAFLETS, by C. R. Root. Each free for the asking. "How to Make a Lawn," very clear directions. "Lawn Pests," How to Eliminate.

When using Kentucky Blue Grass for new lawns, sow one pound for 100 square feet. Bent Grass, use one pound for 300 square feet. **WE SPECIALIZE IN SEEDS FOR LAWNS, WHICH MEANS WE MUST HANDLE THE VERY BEST OBTAINABLE. PRICE IS SECOND CONSIDERATION.**

ERRORS. Write us at once in full that we may make the adjustment to your entire satisfaction.

NON-WARRANTY. While we take all the care possible in selecting our seeds, shrubs, bulbs, and plants, and we believe they will give satisfaction, we cannot guarantee them. All gardeners of experience know that success, even with the seeds of the quality of our **Dependable Grade** depends largely on weather conditions and proper cultivation, thus in common with all of the American Seed Trade Association, we, therefore, cannot guarantee the crop nor give any warranty, express or implied, as to the productiveness of any seeds or bulbs we sell, and will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the seed. If the purchaser does not accept the goods on these terms they are at once to be returned in the original, unbroken package and the purchase price will be refunded. If the seeds do not prove as represented by us we will replace with more or other seeds of same value.

Colorado Customers please add Sales Tax, except on seeds.
